

BOWERS ELECTRICALS LTD

FOR EQUIPMENT NEW OR REFURBISHED – ANYTIME – ANYWHERE

Transformer Manufacture

Bowers Electricals Ltd. manufactures its own range of Distribution, Power and Bespoke Transformers. These are made, in many cases, specifically to suit customers' requirements. Bowers prides itself in fast turn round manufacture, even where the customers' requirements may be outside normal parameters.

Many of our customers additionally require equipment mounting onto their transformers. Our engineering staff can, in many cases, recommend alternative routes for completing complex situations. It is always our intention to help the customer get the best solution to each installation, by providing flexible engineered solutions.

We carry in stock many sizes of transformer from 315kVA to 2000kVA for immediate despatch. You may also be surprised at how quick we can manufacture transformers specifically to suit your requirements.

Bowers Electricals Ltd. also undertake repairs on customers' own transformers. We can totally re-radiator and upgrade your existing transformer, to enable you to maximise your plant investment. Rewinding failed equipment is also undertaken, giving lead-time reductions on new replacement.
